|---------------------|---|
| | Background: The protein encoded by this gene belongs to the ETS family of transcription |
| | factors, which is a large group of evolutionarily conserved transcriptional regulators that play an |
| | important role in a variety of cellular processes throughout development and differentiation, |
| | and are involved in oncogenesis as well. This protein is predominantly expressed in |
| | hematopoietic tissues. Several alternatively spliced transcript variants encoding different |
| | isoforms have been described for this gene (PMID:11108721).[provided by RefSeq, May 2011]. |
