Target Details

| Background: | Synonyms: FAM21A, Family with sequence similarity 21 member C, Hypothetical protein |
|-------------|---|
| | LOC253725, KIAA0592, Protein FAM21C, FA21C_HUMAN. |
| | Background: Playing a essential role in the fission of tubules that serve as transport |
| | intermediates during endosome sorting, the WASH complex is present at the surface of |
| | endosomes and functions to recruit and activate the Arp2/3 complex for induction of actin |
| | polymerization. FAM21, Putative WASH complex subunit FAM21, is a component of the WASH |
| | complex. Having undergone evolutionary duplication, four highly homologous family members |
| | exist including FAM21A, FAM21B, FAM21C and FAM21D. FAM21 links the WASH complex to |
| | endosomes and is required for WASM-dependent retromer-mediated sorting. Also, by directly |
| | interacting with CapZ, FAM21 inhibits its anti-capping activity, thereby regulating actin |
| | dynamics. |
