Background:	Synonyms: Fam3c, FAM3C_HUMAN, family with sequence similarity 3, member C, GS3786,ILEI,
	Interleukin-like EMT inducer, Predicted osteoblast protein, Protein FAM3C.
	Background: ILEI is a 227 amino acid, ubiquitously expressed protein containing an amino-
	terminal signal peptide. Elevated levels of ILEI translation are observed in oncogenic, Ras-
	transformed mammary epithelial cells and epithelial to mesenchymal transition (Emt) as well
	as tumor growth and metastasis. Also, overexpression of ILEI results in loss of ZO-1, a protein
	involved in tight junctions, and expression of cytoplasmic E-cadherin, which has been shown to
	influence loss of polarity and invasiveness. Due to this evidence, it is suspected that ILEI
	cooperates with oncogenic Ras to cause TGF-independent Emt and its overexpression is
	correlated with the invasion, metastasis and survival in a variety of cancers.
