|                     | Background: FGF22 is a member of the fibroblast growth factor (FGF) family. FGF family            |
|                     | members possess broad mitogenic and cell survival activities and are involved in a variety of     |

|                     | repair, tumor growth and invasion. The mouse homolog of this gene was found to be                 |
|                     | preferentially expressed in the inner root sheath of the hair follicle, which suggested a role in |
