	protein, Minichromosome maintenance deficient 3 associated protein, Minichromosome maintenance protein 3 associated protein, Protein GANP. Background: The minichromosome maintenance protein 3 (MCM3) is one of the MCM proteins		
	essential for the initiation of DNA replication. The protein encoded by this gene is a MCM3		
	binding protein. It was reported to have phosphorylation-dependent DNA-primase activity,		
	which was up-regulated in antigen immunization induced germinal center. This protein was		
	demonstrated to be an acetyltransferase that acetylates MCM3 and plays a role in DNA		
	replication. The mutagenesis of a nuclear localization signal of MCM3 affects the binding of		
	this protein with MCM3, suggesting that this protein may also facilitate MCM3 nuclear		
	localization.
