Background:	Synonyms: G protein-regulated inducer of neurite outgrowth 3, GPRIN family member 3, Gprin3
	GRIN3, GRIN3_HUMAN.
	Background: May be involved in neurite outgrowth.G protein-coupled receptors (GPCRs)
	represent a large superfamily of cell-surface receptors that are involved in a multitude of
	physiological processes such as perception of sensory information, modulation of synaptic
	transmission, hormone release/action, regulation of cell contraction/migration and cell
	growth/differentiation. GPCRs interact with G proteins (heterotrimeric GTPases) to synthesize
	intracellular second messengers, such as diacylglycerol, cyclic AMP, inositol phosphates and
	calcium ions. Their diverse biological functions range from vision and olfaction to neuronal and
	endocrine signaling, and are involved in many pathological conditions. GRIN3 (G protein-
	regulated inducer of neurite outgrowth 3), also known as GPRIN3, is a 776 amino acid protein
	that contains a C-terminal region which shares a high homology with GRIN2 and GRIN1, and
	may function in neurite outgrowth.
