Background:	Synonyms: E3 ubiquitin protein ligase RNF144B, RING finger protein 144B, E3 ubiquitin-protein

Target Details

ligase RNF144B, IBR domain containing 2, IBR domain containing protein 2, IBR domain-containing protein 2, IBRDC 2, IBRDC2, p53 inducible RING finger protein, p53-inducible RING finger protein, p53RFP, PIR2, R144B_HUMAN, Ring finger 144B, RING finger protein 144B, RNF 144B, RNF144B.

Background: E3 ubiquitin-protein ligase which accepts ubiquitin from E2 ubiquitin-conjugating enzymes UBE2L3 and UBE2L6 in the form of a thioester and then directly transfers the ubiquitin to targeted substrates such as LCMT2, thereby promoting their degradation. Induces apoptosis via a p53/TP53-dependent but caspase-independent mechanism. However, its overexpression also produces a decrease of the ubiquitin-dependent stability of BAX, a pro-apoptotic protein, ultimately leading to protection of cell death, But, it is not an anti-apoptotic protein per se. Tissue specificity: Broadly expressed, with lowest levels in brain and thymus, and highest levels detectable in heart, ovary and testis.
