Target Details

Background: Synonyms: IDI1, IPP isomerase 1, IPP1, Isopentenyl diphosphate Delta isomerase 1, isopentenyl diphosphate dimethylallyl diphosphate isomerase 1, Isopentenyl pyrophosphate isomerase 1, IDI1_HUMAN.

Background: IDI1 is a peroxisomally localized enzyme that catalyzes the interconversion of isopentenyl diphosphate (IPP) to its highly electrophilic isomer, dimethylallyl diphosphate (DMAPP). These are substrates for the reactions that ultimately result in the synthesis of cholesterol. There is reduction in IPP isomerase activity in peroxisomal deficiency diseases such as Zellweger syndrome and neonatal adrenoleukodystrophy.
