Target Details

MGC129855, NGK2, Potassium voltage-gated channel subfamily C member 1, Shaw, Voltage gated potassium channel, KCNC1_HUMAN, Voltage gated potassium channel subunit Kv3.1, Voltage-gated potassium channel subunit Kv3.1.

Background: KCNC1 mediates the voltage-dependent potassium ion permeability of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, the protein forms a potassium-selective channel through which potassium ions may pass in accordance with their electrochemical gradient. It forms a heteromultimer with KCNG3, KCNG4 and KCNV2.
