	interactor of torsinA, KLHL14, KIAA1384
	Background: KLHL14 is a member of the KLHL family. The kelch motif was initially discovered
	in Kelch. In this protein there are six copies of the motif. It has been shown for one member that
	it is related to Galactose Oxidase for which a structure has been solved. Two isoforms of this
	protein exist - 70 kDa and 43 kDa.
