### **Target Details**

Background:	Synonyms: KLHL 3, FLJ40871, kelch Drosophila like 3, kelch like 3 Drosophila, kelch like 3, Kelch		
	like protein 3, KIAA1129, MGC44594, KLHL3_HUMAN.		
	Background: KLHL3 protein contains a poxvirus and zinc finger domain at the N-terminus and		
	six tandem repeats (kelch repeats) at the C-terminus. At the amino acid level, KLHL3 shares		
	77 % similarity with Drosophila kelch and 89 % similarity with Mayven (KLHL2), another human		
	kelch homolog. At least three isoforms are produced and may be the result of alternative		
	promoter usage. The KLHL3 maps within the smallest commonly deleted segment in myeloid		
	leukemias characterized by a deletion of 5q, however, no inactivating mutations of KLHL3 could		
	be detected in malignant myeloid disorders with loss of 5q.
