Alternative Name:	KLHL3 ( <a href="#">KLHL3 Products</a> )

## Target Details

Background:	<p>Synonyms: KLHL 3, FLJ40871, kelch Drosophila like 3, kelch like 3 Drosophila, kelch like 3, Kelch like protein 3, KIAA1129, MGC44594, KLHL3_HUMAN.</p> <p>Background: KLHL3 protein contains a poxvirus and zinc finger domain at the N-terminus and six tandem repeats (kelch repeats) at the C-terminus. At the amino acid level, KLHL3 shares 77 % similarity with Drosophila kelch and 89 % similarity with Mayven (KLHL2), another human kelch homolog. At least three isoforms are produced and may be the result of alternative promoter usage. The KLHL3 maps within the smallest commonly deleted segment in myeloid leukemias characterized by a deletion of 5q, however, no inactivating mutations of KLHL3 could be detected in malignant myeloid disorders with loss of 5q.</p>
