## Target Details

Background:	Synonyms: KIAA0188, LPIN1, PAP1, Phosphatidate phosphatase LPIN1, LPIN1_HUMAN.
	Background: Lipin 1 is a member of the Lipin family of nuclear proteins. This family contains
	three members: Lipin 1, Lipin 2 and Lipin 3, all of which contain a nuclear signal sequence, a
	highly conserved amino-terminal (NLIP) domain and a carboxy-terminal (CLIP) domain. LPIN1
	(Lipin 1) is crucial for normal adipose tissue development and metabolism. LPIN1 selectively
	activates a subset of PGC1 alpha target pathways, including fatty acid oxidation and
	mitochondrial oxidative phosphorylation by inducing expression of the nuclear receptor
	PPARalpha. LPIN1 also inactivates the lipogenic program and suppresses circulating lipid
	levels. An abundance of LPIN1 promotes fat accumulation and insulin sensitivity, whereas a
	deficiency in LPIN1 may deter normal adipose tissue development, resulting in insulin
	resistance and lipodystrophy, a heterogeneous group of disorders characterized by loss of body
	fat, fatty liver, hypertriglyceridemia and insulin resistance.
