	6, DSS/AHC critical interval gene, from MAGE superfamily, 6, MAGE B2 antigen, MAGE XP 2,
	Mage-b2, Mage-rs2, melanoma antigen family B, 2, Melanoma antigen, family B, 1, Melanoma
	associated antigen B2, Smage-2 protein, Smage2.
	Background: This gene is a member of the MAGEB gene family. The members of this family
	have their entire coding sequences located in the last exon, and the encoded proteins show 50
	to 68 $\%$ sequence identity to each other. The promoters and first exons of the MAGEB genes
	show considerable variability, suggesting that the existence of this gene family enables the
	same function to be expressed under different transcriptional controls. This gene is localized in
	the DSS (dosage-sensitive sex reversal) critical region. It is expressed in testis and placenta,
	and in a significant fraction of tumors of various histological types. The MAGEB genes are
	clustered on chromosome Xp22-p21. [provided by RefSeq, Jul 2008].
