NALP12 (NLRP12 Products)

Target Details				
Background:	Synonyms: CLR19.3, FCAS2, Monarch 1, Monarch-1, NACHT, leucine rich repeat and PYD containing 12, NACHT, LRR and PYD containing protein 12, NACHT, LRR and PYD domains- containing protein 12, NAL12_HUMAN, NLR family, pyrin domain containing 12, NLRP12, Nucleotide-binding oligomerization domain, leucine rich repeat and pyrin domain containing 12, PAN6, PYPAF7, PYRIN containing APAF1 like protein 7, PYRIN-containing APAF1-like protein 7, Regulated by nitric oxide, RNO, RNO2. Background: May mediate activation of CASP1 via ASC and promote activation of NF-kappa-B via IKK.NALP proteins are cytoplasmic proteins that form a subfamily within the larger CATERPILLER family and are thought to play a crucial role in cell proliferation and reproduction. Like all other NALP family members, NALP12, also known as Monarch-1, has a C-terminal leucine-rich repeat (LRR) region, an N-terminal Pyrin domain (PYD) followed by a NACHT domain, and a NACHT-associated domain. NALP12 is thought to act as an attenuating factor of inflammation by suppressing inflammatory responses such as NF-kB activation by TLR-signaling molecules MyD88, IRAK-1, TRAF6 and RIPK1 in activated monocytes. Recent evidence suggests that mutations in NALP12 result in hereditary periodic fever syndromes.
