NDK5_HUMAN.	

Background: NME5 does not seem to have NDK kinase activity but confers protection from cell death by Bax and alters the cellular levels of several antioxidant enzymes including Gpx5. It may play a role in spermiogenesis by increasing the ability of late-stage spermatids to eliminate reactive oxygen species. NME5 is specifically expressed in testis germinal cells.

Gene ID: 8382

Pathways: Nucleotide Phosphorylation, Ribonucleoside Biosynthetic Process, Negative Regulation of

intrinsic apoptotic Signaling
