Target:	Reticulon 4 (RTN4)
Alternative Name:	Reticulon 4 ( <a href="#">RTN4 Products</a> )
Background:	<p>Synonyms: Reticulon-4, Rtn4, Neurite outgrowth inhibitor, Nogo protein, Foccen, Neuroendocrine-specific protein, NSP, euroendocrine-specific protein C homolog, RTN-x, Reticulon-5, RTN 4A, Nogo-A, RTN-xL, RTN 4B, ASY, Nogo-B, RTN-xS, Foccen-M, RTN 4C, Nogo-C, Foccen-S, RTN4-B2, Rtn-T</p> <p>Background: Reticulons are associated with the endoplasmic reticulum, and are involved in neuroendocrine secretion or in membrane trafficking in neuroendocrine cells. The reticulon protein is a potent neurite outgrowth inhibitor which may also help block the regeneration of the central nervous system in higher vertebrates. Developmental neurite growth regulatory factor with a role as a negative regulator of axon-axon adhesion and growth, and as a facilitator of neurite branching. Reticulon 4 regulates neurite fasciculation, branching and extension in the developing nervous system. Involved in down-regulation of growth, stabilization of wiring and restriction of plasticity in the adult CNS. It regulates the radial migration of cortical neurons via an RTN4R-LINGO1 containing receptor complex. May inhibit BACE1 activity and amyloid precursor protein processing.</p>
