Target Details

Background:	Synonyms: Acid phosphatase 1 soluble, Acid phosphatase of erythrocyte, Adipocyte acid
	phosphatase, Cytoplasmic phosphotyrosyl protein phosphatase, HAAP, Low molecular weight
	phosphotyrosine protein phosphatase, PAP1, PAP2, Protein tyrosine phosphatase, PTPase,
	Purple acid phosphatase, Red cell acid phosphatase 1, PPAC_HUMAN.
	Background: Phosphatase enzymes catalyse hydrolysis of phosphoric acid esters of various
	alcohols, e.g. a hexose phosphate, to yield the alcohol and free inorganic phosphate. This may
	be a way of recycling phosphate in the cell, and the level of phosphate may be elevated under
	conditions of phosphate starvation (in algae for example). Acid phosphatases have pH optima
	below 7, whereas alkaline phosphatases are most active above pH 7. Commercial quantities of
	acid phosphatase are obtained from plant sources e.g. potato and wheat germ, whereas similar
	quantities of alkaline phosphatase are obtained from animal intestine and bacteria.
Gene ID:	5068
