Porimin (TMEM123 Products)

| Target Details | |
|---------------------|--|
| Background: | Synonyms: KCT3, Keratinocytes associated transmembrane protein 3, Pro oncosis receptor |
| | inducing membrane injury, Serine/threonine rich receptor, TMEM123, Transmembrane protein 123, PORIM_HUMAN. |
| | Background: This gene encodes a highly glycosylated transmembrane protein with a high |
| | content of threonine and serine residues in its extracellular domain, similar to a broadly defined |
| | category of proteins termed mucins. Exposure of some cell types to anti PORIMIN (pro oncosis |
| | receptor inducing membrane injury) antibody, crosslinks this protein on the cell surface and |
| | induces a type of cell death termed oncosis. Oncosis is distinct from apoptosis and is |
| | characterized by a loss of cell membrane integrity without DNA fragmentation. This gene |
| | product is proposed to function as a cell surface receptor that mediates cell death. |
