| | Background: Prominin 2 is a 112 kDa glycoporotein structurally related to Prominin 1 (CD133) |
| | although amino acid similarity is not more than 30 % , but their genomic organization is |
| | strikingly similar. Like Prominin 1, the prominin 2 exhibit similar membrane topology with 5 |
| | trans-membrane domains and two large glycosylated extracellular domains. Similar to |
| | Prominin1 localization, the Prominin 2 is also associated with membrane protrusions of the |
| | epithelial cells from adult kidney, and all along the digestive track and other epithelial |
| | tissues.Prominin 2 expression is down-regulated in aggressive prostate cancer cell lines and |
| | transient transfection of PROML2 expression vectors has been shown to induce apoptosis in |
| | cultured prostate cancer cells, suggesting a tumor suppressive role for Prominin 2. Prominin 2 |
| | expression is likely to be involved in growth suppression in the prostate, and down-regulation of |
| | Prominin 2 may disrupt normal prostatic homeostasis and lead to uncontrolled prostatic |
| | growth. |
