| Background: | Synonyms: CC1, ATG17, FIP200, PPP1R131, RB1-inducible coiled-coil protein 1, FAK family |
|---------------------|--|
| | kinase-interacting protein of 200 kDa, RB1CC1, KIAA0203, RBICC |
| | Background: Plays a role as a modulator of TGF-beta-signaling by restricting substrate |
| | specificity of RNF111. Involved in autophagy. Regulates early events but also late events of |
| | autophagosome formation through direct interaction with Atg16L1. Required for the formation |
| | of the autophagosome-like double-membrane structure that surrounds the Salmonella- |
| | containing vacuole (SCV) duting S.typhimurium infection and subsequent xenophagy. |
| | Autophagy positively regulates repair of DNA damage induced by ionizing radiation and |
| | negatively regulates apoptosis. Plays an indispensible role in fetal hematopoiesis and in the |
| | regulation of neuronal homeostasis (By similarity). Implicated in the regulation of RB1 |
| | expression. Functions as a DNA-binding transcription factor. Is a potent regulator of the RB1 |
| | pathway and a mediator that plays a crucial role in muscular differentiation. Expression is, thus |
| | a prerequisite for myogenic differentiation. Inhibits PTK2/FAK1 and PTK2B/PYK2 activity and |
| | activation of downstream signaling pathways. |
| Gene ID: | 9821 |
