#### Target Details

| Background:         | Synonyms: CC1, ATG17, FIP200, PPP1R131, RB1-inducible coiled-coil protein 1, FAK family                    |
|---------------------|--|
|                     | kinase-interacting protein of 200 kDa, RB1CC1, KIAA0203, RBICC   |
|                     | Background: Plays a role as a modulator of TGF-beta-signaling by restricting substrate                     |
|                     | specificity of RNF111. Involved in autophagy. Regulates early events but also late events of               |
|                     | autophagosome formation through direct interaction with Atg16L1. Required for the formation                |
|                     | of the autophagosome-like double-membrane structure that surrounds the Salmonella-                         |
|                     | containing vacuole (SCV) duting S.typhimurium infection and subsequent xenophagy.                          |
|                     | Autophagy positively regulates repair of DNA damage induced by ionizing radiation and                      |
|                     | negatively regulates apoptosis. Plays an indispensible role in fetal hematopoiesis and in the              |
|                     | regulation of neuronal homeostasis (By similarity). Implicated in the regulation of RB1                    |
|                     | expression. Functions as a DNA-binding transcription factor. Is a potent regulator of the RB1              |
|                     | pathway and a mediator that plays a crucial role in muscular differentiation. Expression is, thus,         |
|                     | a prerequisite for myogenic differentiation. Inhibits PTK2/FAK1 and PTK2B/PYK2 activity and                |
|                     | activation of downstream signaling pathways.   |
