	Background: RNA-binding protein that specifically bind the 3'-UTR of CDKN1A transcripts,	
	leading to maintain the stability of CDKN1A transcripts, thereby acting as a mediator of the	
	p53/TP53 family to regulate CDKN1A. CDKN1A is a cyclin-dependent kinase inhibitor	
	transcriptionally regulated by the p53/TP53 family to induce cell cycle arrest. Isoform 1, but not	
	isoform 2, has the ability to induce cell cycle arrest in G1 and maintain the stability of CDKN1A	
	transcripts induced by p53/TP53. Also acts as a mRNA splicing factor. Specifically regulates	
	the expression of FGFR2-IIIb, an epithelial cell-specific isoform of FGFR2. Plays a role in	
	myogenic differentiation.	
Gene ID:	55544	
Pathways:	Regulation of Muscle Cell Differentiation, Skeletal Muscle Fiber Development
