Background:	Synonyms: HRCA1, RCA1, Ring finger protein 139, TRC8, RN139_HUMAN.	
	Background: The protein encoded by this gene is a multi-membrane spanning protein	
	containing a RING-H2 finger. This protein is located in the endoplasmic reticulum, and has been	
	shown to possess ubiquitin ligase activity. This gene was found to be interrupted by a t(3:8)	
	translocation in a family with hereditary renal and non-medulary thyroid cancer. Studies of the	
	Drosophila counterpart suggested that this protein may interact with tumor suppressor protein	
	VHL, as well as with COPS5/JAB1, a protein responsible for the degradation of tumor	
	suppressor CDKN1B/P27KIP.
