## Target Details

Alternative Name:	RSV (RSV Products)
Target Type:	Virus
Background:	Synonyms: RS virus, RSV, GLYC_HRSVA, Major surface glycoprotein G, Attachment
	glycoprotein G, Membrane-bound glycoprotein, mG, G.
	Background: Respiratory syncytial virus (RSV) is a major cause of respiratory illness in young
	children. RSV infection produces a variety of signs and symptoms involving different areas of
	the respiratory tract, from the nose to the lungs. RSV is a negative sense, enveloped RNA virus.
	The virion is variable in shape and size with average diameter of between 120 and 300 nm. The
	63 kD RSV fusion protein of the RSS 2 strain (subtype A) directs fusion of viral and cellular
	membranes, results in viral penetration, and can direct fusion of infected cells with adjoining
	cells, resulting in the formation of syncytia or multi nucleated giant cells.
