| | Background: Component of the SKA1 complex, a microtubule-binding subcomplex of the outer |
| | kinetochore that is essential for proper chromosome segregation. Required for timely anaphase |
| | onset during mitosis, when chromosomes undergo bipolar attachment on spindle microtubules |
| | leading to silencing of the spindle checkpoint. The SKA1 complex is a direct component of the |
| | kinetochore-microtubule interface and directly associates with microtubules as oligomeric |
| | assemblies. The complex facilitates the processive movement of microspheres along a |
| | microtubule in a depolymerization-coupled manner. In the complex, it mediates the interaction |
| | with microtubules. |
