## Target Details

---

SMC 4, SMC4, SMC4L1, Structural maintenance of chromosomes 4 like 1, SMC4\_HUMAN.

Background: SMC4 is a central component of the condensin complex, which is required for conversion of interphase chromatin into mitotic-like condense chromosomes. The condensin complex probably introduces positive supercoils into relaxed DNA in the presence of type I topoisomerases and converts nicked DNA into positive knotted forms in the presence of type II topoisomerases.
