Target Details

| Background: | Synonyms: SORT1,100 kDa NT receptor, Glycoprotein 95 Short name: Gp95, Neurotensin | | |
|--------------------------|--|--|--|
| | receptor 3 Short name: NT3 Short name: NTR3, SORT_HUMAN | | |
| | Background: Functions as a sorting receptor in the Golgi compartment and as a clearance | | |
| | receptor on the cell surface. Required for protein transport from the Golgi apparatus to the | | |
| | lysosomes by a pathway that is independent of the mannose-6-phosphate receptor (M6PR). | | |
| | Also required for protein transport from the Golgi apparatus to the endosomes. Promotes | | |
| | neuronal apoptosis by mediating endocytosis of the proapoptotic precursor forms of BDNF | | |
| | (proBDNF) and NGFB (proNGFB). Also acts as a receptor for neurotensin. May promote | | |
| | mineralization of the extracellular matrix during osteogenic differentiation by scavenging | | |
| | extracellular LPL. Probably required in adipocytes for the formation of specialized storage | | |
| | vesicles containing the glucose transporter SLC2A4/GLUT4 (GLUT4 storage vesicles, or GSVs). | | |
| | These vesicles provide a stable pool of SLC2A4 and confer increased responsiveness to insulin | | |
| | May also mediate transport from the endoplasmic reticulum to the Golgi. | | |
