| | Sperm autoantigenic protein 17, Sperm protein 17, Sperm surface protein Sp17. |
|---------------------|---|
| | Background: SP17 is a protein present at the cell surface. The N-terminus has sequence |
| | similarity to human cAMP-dependent protein kinase A (PKA) type II alpha regulatory subunit |
| | (RIIa) while the C-terminus has an IQ calmodulin-binding motif. The central portion of the |
| | protein has carbohydrate binding motifs and likely functions in cell-cell adhesion. The protein |
| | was initially characterized by its involvement in the binding of sperm to the zona pellucida of |
| | the oocyte. Recent studies indicate that it is also involved in additional cell-cell adhesion |
| | functions such as immune cell migration and metastasis. A retrotransposed pseudogene is |
| | present on chromosome 10q22.[provided by RefSeq, Jan 2009]. |
