Target Details

Background:	Synonyms: Human serine kinase SRPK2 mRNA, complete cds, Serine kinase SRPK2,
	Serine/arginine rich protein specic kinase 2, Serine/threonine protein kinase SRPK2, SFRS
	protein kinase 2, SFRSK2, SR protein specic kinase 2, SRPK2_HUMAN.
	Background: SRPK2 belongs to the protein kinase superfamily. It phosphorylates RS domain-
	containing proteins, such as SFRS1 and SFRS2 on serine residues. It has a role in spliceosome
	assembly and in mediating the trafficking of splicing factors and appears to mediate HBV core
	protein phosphorylation which is a prerequisite for pregenomic RNA encapsidation into viral
	capsids. SRPK2 highly expressed in brain, moderately expressed in heart and skeletal muscle
	and at low levels in lung, liver, and kidney.
