Target Details

Background:	<p>Synonyms: Ser/Arg related nuclear matrix protein, Ser/Arg-related nuclear matrix protein, Serine/arginine repetitive matrix protein 1, SR related nuclear matrix protein of 160 kDa, SR-related nuclear matrix protein of 160 kDa, SRm160, Srrm1, SRRM1_HUMAN.</p> <p>Background: Part of pre- and post-splicing multiprotein mRNP complexes. Involved in numerous pre-mRNA processing events. Promotes constitutive and exonic splicing enhancer (ESE)-dependent splicing activation by bridging together sequence-specific (SR family proteins, SFRS4, SFRS5 and TRA2B/SFRS10) and basal snRNP (SNRP70 and SNRPA1) factors of the spliceosome. Stimulates mRNA 3'-end cleavage independently of the formation of an exon junction complex. Binds both pre-mRNA and spliced mRNA 20-25 nt upstream of exon-exon junctions. Binds RNA and DNA with low sequence specificity and has similar preference for either double- or single-stranded nucleic acid substrates.</p>
