| Alternative Name:         | Synaptotagmin (SYT Products)   |  |
| Background:               | Synonyms: P65, SYT, SVP65, Synaptotagmin-1, Synaptotagmin I, SytI, SYT1<br>Background: May have a regulatory role in the membrane interactions during trafficking of<br>synaptic vesicles at the active zone of the synapse. It binds acidic phospholipids with a<br>specificity that requires the presence of both an acidic head group and a diacyl backbone. A<br>Ca(2+)-dependent interaction between synaptotagmin and putative receptors for activated<br>protein kinase C has also been reported. It can bind to at least three additional proteins in a<br>Ca(2+)-independent manner, these are neurexins, syntaxin and AP2. |  |
