Target Details		
Alternative Name:	Synaptotagmin (SYT Products)	
Background:	Synonyms: P65, SYT, SVP65, Synaptotagmin-1, Synaptotagmin I, SytI, SYT1 Background: May have a regulatory role in the membrane interactions during trafficking of synaptic vesicles at the active zone of the synapse. It binds acidic phospholipids with a specificity that requires the presence of both an acidic head group and a diacyl backbone. A Ca(2+)-dependent interaction between synaptotagmin and putative receptors for activated protein kinase C has also been reported. It can bind to at least three additional proteins in a Ca(2+)-independent manner, these are neurexins, syntaxin and AP2.
