#### Target Details

Background:	Synonyms: KLIP, ABIN2, FLIP1, TNFAIP3-interacting protein 2, A20-binding inhibitor of NF-
	kappa-B activation 2, ABIN-2, Fetal liver LKB1-interacting protein, TNIP2
	Background: Inhibits NF-kappa-B activation by blocking the interaction of RIPK1 with its
	downstream effector NEMO/IKBKG. Forms a ternary complex with NFKB1 and MAP3K8 but
	appears to function upstream of MAP3K8 in the TLR4 signaling pathway that regulates
	MAP3K8 activation. Involved in activation of the MEK/ERK signaling pathway during innate
	immune response, this function seems to be stimulus- and cell type specific. Required for
	stability of MAP3K8. Involved in regulation of apoptosis in endothelial cells, promotes TEK
	agonist-stimulated endothelial survival. May act as transcriptional coactivator when
	translocated to the nucleus. Enhances CHUK-mediated NF-kappa-B activation involving NF-
	kappa-B p50-p65 and p50-c-Rel complexes.
Gene ID:	79155
UniProt:	Q8NFZ5
Pathways:	Activation of Innate immune Response, Cellular Response to Molecule of Bacterial Origin
