Target Details

Target:	EI24
Alternative Name:	EI24 (EI24 Products)
Background:	Synonyms: Ei24, EI24_HUMAN, EPG4, Etoposide induced 2.4 mRNA, Etoposide-induced protein

Target Details

2.4 homolog, p53-induced gene 8 protein, PIG8, TP53I8, Tumor protein p53 inducible protein 8.
Background: This gene has higher expression in p53-expressing cells than in control cells and is an immediate-early induction target of p53-mediated apoptosis. The protein encoded by this gene contains six putative transmembrane domains and may suppress cell growth by inducing apoptotic cell death through the caspase 9 and mitochondrial pathways. This gene is located on human chromosome 11q24, a region frequently altered in cancers. Alternative splicing results in two transcript variants encoding different isoforms.
