| | Ubiquitin-conjugating enzyme E2 variant 1, UEV-1, UEV1. |
| | Background: Has no ubiquitin ligase activity on its own. The UBE2V1-UBE2N heterodimer |
| | catalyzes the synthesis of non-canonical poly-ubiquitin chains that are linked through Lys-63. |
| | This type of poly-ubiquitination activates IKK and does not seem to involve protein degradation |
| | by the proteasome. Plays a role in the activation of NF-kappa-B mediated by IL1B, TNF, TRAF6 |
| | and TRAF2. Mediates transcriptional activation of target genes. Plays a role in the control of |
| | progress through the cell cycle and differentiation. Plays a role in the error-free DNA repair |
| | pathway and contributes to the survival of cells after DNA damage. |
| Gene ID: | 7335 |
