Background:	Synonyms: CDW2, GID7, MIP2, WD repeat-containing protein 26, CUL4- and DDB1-associated
	WDR protein 2, Myocardial ischemic preconditioning up-regulated protein 2, WDR26, PR0852
	Background: This gene encodes a member of the WD repeat protein family. WD repeats are
	minimally conserved regions of approximately 40 amino acids typically bracketed by gly-his and
	trp-asp (GH-WD), which may facilitate formation of heterotrimeric or multiprotein complexes.
	Members of this family are involved in a variety of cellular processes, including cell cycle
	progression, signal transduction, apoptosis, and gene regulation. Two transcript variants
	encoding two different isoforms have been found for this gene. [provided by RefSeq].
