Background:	Synonyms: FLJ10385, TCAB1, telomerase Cajal Body protein 1, WD repeat containing protein			
	79, WRAP53, WDR79/TCAB1, WAP53_HUMAN.			
	Background: WDR79 contains six WD (tryptophan-aspartate) repeat domains found in a			
	number of proteins that function as adaptor molecules in signal transduction and cytoskeletal			
	organization. The WD repeat is defined by four or more repeating units of a conserved core of			
	approximately 40 amino acids ending with tryptophan-aspartic acid (WD). WD repeats may			
	serve as sites of protein-protein interaction for adaptor proteins and facilitate multiprotein			
	complex formation. The function of the WDR79 protein has not been characterized, however			
	significant and consistent single nucleotide polymorphisms in the WDR79 gene have been			
	found to be associated with ER negative breast cancer.
