Image 1. Goat anti Plasminogen antibody was used to detect Plasminogen under reducing (R) and non-reducing (NR) conditions. Reduced samples of purified target proteins contained 4% BME and were boiled for 5 minutes. Samples of ~1ug of protein per lane were run by SDS-PAGE. Protein was transferred to nitrocellulose and probed with 1:3000 dilution of primary antibody (ON 4 C in ABIN925618). Detection shown was using Dylight 649 conjugated Donkey (605-743-125 lot 20834 1:10K anti goat TBS/ABIN925618) 1 hr RT. Images were collected using the BioRad VersaDoc System.
