Target Details

Target:	DIDO1
Alternative Name:	DIDO1 (DIDO1 Products)
Background:	In mice, the death inducer-obliterators-1 gene is upregulated by apoptotic signals and encodes a cytoplasmic protein that translocates to the nucleus upon apoptotic signal activation. When overexpressed, the mouse protein induced apoptosis in cell lines growing in vitro. DIDO1 gene is similar to the mouse gene and therefore is thought to be involved in apoptosis. Synonyms:
