Target Details

Target:	Salmonella
Abstract:	Salmonella Products

Target Details

Target Type:	Bacteria
Background:	Salmonella is a genus of rod-shaped, Gram-negative, non-spore-forming, predominantly motile enterobacteria with diameters around 0.7 to 1.5 µm, lengths from 2 to 5 µm, and flagella which grade in all directions. They are chemoorganotrophs, obtaining their energy from oxidation and reduction reactions using organic sources, and are facultative anaerobes. Most species produce hydrogen sulfide, which can readily be detected by growing them on media containing ferrous sulfate, such as TSI. Synonyms: Monoclonal Salmonella antibody (LPS core), Anti-Salmonella antibody (LPS core), Salmonella typhimurium antibody.
