Human breast cancer tissue

Immunohistochemistry

Image 1. Paraffin embedded sections of human breast canitrocelluloseer tissue were initrocelluloseubated with anti-human FADD (1:50) for 2 hours at room temperature. Antigen retrieval was performed in 0.1M sodium citrate buffer and detected using Diaminobenzidine (DAB)

Western Blotting

Image 2. Cell lysates of Jurkat (30 ug) were resolved by SDS-PAGE, transferred to nitrocellulose membrane and probed with anti-human FADD (1:500). Proteins were visualized using a goat anti-mouse secondary antibody conjugated to HRP and an ECL detection system.
