Ove	rvi	ev	V

Quantity:	100 tests
Target:	ITGAL
rarget.	ITGAL
Reactivity:	Human
Host:	Mouse
Clonality:	Monoclonal
Conjugate:	This ITGAL antibody is conjugated to FITC
Application:	Flow Cytometry (FACS)

Product Details

Immunogen:	Leukocytes from a patient suffering from a LGL-type leukaemia.
Clone:	MEM-25
Isotype:	lgG1
Specificity:	The antibody MEM-25 reacts with an extracellular epitope of CD11a (alpha subunit of human LFA-1), a 170-180 kDa type I transmembrane glycoprotein expressed on B and T lymphocytes, monocytes, macrophages, neutrophils, basophils and eosinophils.
Cross-Reactivity (Details):	Human
Purification:	Purified antibody is conjugated with fluorescein isothiocyanate (FITC) under optimum conditions and unconjugated antibody and free fluorochrome are removed by size-exclusion chromatography.

Target Details

Target:	ITGAL
Alternative Name:	CD11a (ITGAL Products)
Background:	Integrin subunit alpha L,CD11a (LFA-1 alpha) together with CD18 constitute leukocyte function-
	associated antigen 1 (LFA-1), the alphaLbeta2 integrin. CD11a is implicated in activation of LFA
	1 complex. LFA-1 is expressed on the plasma membrane of leukocytes in a low-affinity
	conformation. Cell stimulation by chemokines or other signals leads to induction the high-
	affinity conformation, which supports tight binding of LFA-1 to its ligands, the intercellular
	adhesion molecules ICAM-1, -2, -3. LFA-1 is thus involved in interaction of various immune cells
	and in their tissue-specific settlement, but participates also in control of cell differentiation and
	proliferation and of T-cell effector functions. Blocking of LFA-1 function by specific antibodies
	or small molecules has become an important therapeutic approach in treatment of multiple
	inflammatory diseases. For example, humanized anti-LFA-1 antibody Efalizumab (Raptiva) is
	being used to interfere with T cell migration to sites of inflammation, binding of cholesterol-
	lowering drug simvastatin to CD11a allosteric site leads to immunomodulation and increase in
	lymphocytic cholinergic activity.,LFA-1, LFA1A, ITGAL
Gene ID:	3683
UniProt:	P20701
Pathways:	Activated T Cell Proliferation, Integrin Complex
Application Details	
Application Notes:	Flow cytometry: The reagent is designed for analysis of human blood cells using 20 µL reagent
	/ 100 μL of whole blood or 10^6 cells in a suspension. The content of a vial (2 ml) is sufficient for
	100 tests.
Comment:	The purified antibody is conjugated with Fluorescein isothiocyanate (FITC) under optimum
	conditions. The reagent is free of unconjugated FITC and adjusted for direct use. No
	reconstitution is necessary.
Restrictions:	For Research Use only
Handling	
Reconstitution:	No reconstitution is necessary.
Reconstitution: Buffer:	No reconstitution is necessary. Stabilizing phosphate buffered saline (PBS), pH 7.4, 15 mM sodium azide

Handling

Precaution of Use:	This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.
Handling Advice:	Do not freeze. Avoid prolonged exposure to light.
Storage:	4 °C
Storage Comment:	Store at 2-8°C. Protect from prolonged exposure to light. Do not freeze.
