Background:	CLCA1 belongs to the calcium sensitive chloride conductance protein family. To date, all
	members of this gene family map to the same site on chromosome 1p31-p22 and share high
	degrees of homology in size, sequence and predicted structure, but differ significantly in their
	tissue distributions. This gene product is expressed predominantly in the small intestine and
	colon mucosa, and may be involved in secretory or absorptive processes.Synonyms: CACC1,
