Alternative Name:FBW1A (BTRC Products)Background:This gene encodes a member of the F-box protein family which is character approximately 40 amino acid motif, the F-box. The F-box proteins constitut subunits of ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-bo phosphorylation-dependent ubiquitination. The F-box proteins are divided containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs different protein-protein interaction modules or no recognizable motifs. This protein is homologous to Xenopus bTrCP1, yeast Met30,	ute one of the four ox), which function in into 3 classes: Fbws s containing either

Actin filaments have been labeled with Alexa Fluor 555 phalloidin (red).DAPI was used to stain the cell nuclear (blue).

### Immunohistochemistry (Paraffin-embedded Sections)

**Image 2.** BRTC1 Antibody (N-term) immunohistochemistry analysis in formalin fixed and paraffin embedded human brain tissue followed by peroxidase conjugation of the secondary antibody and DAB staining. This data demonstrates the use of BRTC1 Antibody (N-term) for immunohistochemistry. Clinical relevance has not been evaluated.

#### Western Blotting
