Alternative Name:	Olfactory Receptor 10J5 (OR10J5 Products)	
Background:	Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response	

that triggers the perception of a smell. The olfactory receptor proteins are members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure with many neurotransmitter and hormone receptors and are responsible for the recognition and G protein-mediated transduction of odorant signals. The olfactory receptor gene family is the largest in the genome. The nomenclature assigned to the olfactory receptor genes and proteins for this organism is independent of other organisms. Synonyms: OR10J5, Olfactory receptor OR1-28

Flow Cytometry

Image 1. Flow cytometric analysis of HL-60 cells using OR10J5 Antibody (C-term) Cat.-No AP53011PU-N (right histogram) compared to a negative control cell (left histogram). FITC-conjugated goat-anti-rabbit secondary antibodies were used for the analysis.

Western Blotting

Image 2. Western blot analysis of OR10J5 Antibody (Cterm) in HL-60 cell line lysates (35ug/lane). This demonstrates the OR10J5 antibody detected the OR10J5 protein (arrow).
