Overview

Quantity:	100 mg
Target:	gamma Globulin Fraction
Origin:	Chicken
Source:	Chicken
Protein Type:	Native
Application:	Control (Ct), SDS-PAGE (SDS)

Product Details

Purpose:	Chicken Gamma Globulin Fraction consists of the fraction of blood serum which contains whole antibodies as well as other non-albumin plasma proteins.
Characteristics:	Gamma globulins are a class of globulins, identified by their position after serum protein electrophoresis. The most significant gamma globulins are immunoglobulins ("Igs"), more commonly known as antibodies, although some Igs are not gamma globulins, and some gamma globulins are not Igs. Globulin is one of the three main types of serum proteins, the others being albumin and fibrinogen. Some globulins are produced in the liver, while others are made by the immune system.
Purification:	Chicken gamma globulin was prepared from normal serum by a multi-step process which includes delipidation and salt fractionation followed by extensive dialysis against the buffer stated above. Assay by immunoelectrophoresis resulted in precipitin arcs against anti-Chicken Serum corresponding to gamma globulins.
