Datasheet for ABIN967774 anti-EPS8 antibody (AA 628-821)

2 Images

3 Publications

Overview

Quantity:	50 µg
Target:	EPS8
Binding Specificity:	AA 628-821
Reactivity:	Human, Rat, Mouse, Dog
Host:	Mouse
Clonality:	Monoclonal
Conjugate:	This EPS8 antibody is un-conjugated
Application:	Western Blotting (WB), Immunohistochemistry (IHC), Immunofluorescence (IF), Immunoprecipitation (IP)

Product Details

Immunogen:	Mouse Eps8 aa. 628-821
Clone:	15-Eps8
Isotype:	lgG1
Cross-Reactivity:	Human, Rat (Rattus), Dog (Canine)
Characteristics:	1. Since applications vary, each investigator should titrate the reagent to obtain optimal results.
	2. Source of all serum proteins is from USDA inspected abattoirs located in the United States.
	3. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide
	compounds in running water before discarding to avoid accumulation of potentially explosive
	deposits in plumbing.
	4. Please refer to us for technical protocols.

Product Details

Purification:

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography.

Target Details

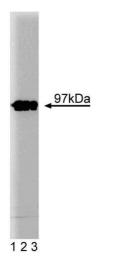

Target:	EPS8
Alternative Name:	Eps8 (EPS8 Products)
Background:	The p97 [Eps8] protein, a substrate for EGF-R tyrosine kinase, contains an SH3 domain, but lacks a functional SH2 domain. Antibodies to Eps8 recognize the 97 kDa protein and a less abundant 68 kDa protein. Both forms are tyrosine-phosphorylated following treatment of cells with EGF. It is likely that p68 [Eps8] is synthesized from an alternatively spliced mRNA since two major Eps8-specific mRNAs are detected by Northern analysis. Co-immunoprecipitation studies have demonstrated a physical association between the Eps8 protein and the EGF-R both in vivo and in vitro. For many EGF-R substrates, this interaction is mediated through an SH2 domain of the substrate. Since Eps8 lacks a well defined SH2 domain and a fusion protein containing the SH2-like region of Eps8 could not bind EGF-R, the mechanism of Eps8-EGF-R association remains unclear. Overexpression of Eps8 in fibroblasts and hematopoietic cells results in an increased mitogenic response to EGF, suggesting that Eps8 has a role in the modulation of EGF-R function.
Molecular Weight:	97 kDa
Pathways:	EGFR Signaling Pathway, Regulation of Actin Filament Polymerization
Application Details	
Comment:	Related Products: ABIN967389, ABIN968550
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Concentration:	250 µg/mL
Buffer:	Aqueous buffered solution containing BSA, glycerol, and ≤ 0.09 % sodium azide.
Preservative:	Sodium azide
Precaution of Use:	This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which
