Datasheet for ABIN968381 anti-G3BP1 antibody (AA 210-323)

4 Images

2 Publications

Overview

Quantity:	150 µg
Target:	G3BP1
Binding Specificity:	AA 210-323
Reactivity:	Human
Host:	Mouse
Clonality:	Monoclonal
Conjugate:	This G3BP1 antibody is un-conjugated
Application:	Western Blotting (WB), Immunofluorescence (IF)

Product Details

Immunogen:	Human G3BP aa. 210-323
Clone:	23-G3BP
lsotype:	lgG1
Characteristics:	 Since applications vary, each investigator should titrate the reagent to obtain optimal results. Source of all serum proteins is from USDA inspected abattoirs located in the United States. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing. Please refer to us for technical protocols.
Purification:	The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography.

Target Details	
Target:	G3BP1
Alternative Name:	G3BP (G3BP1 Products)
Background:	The Ras proteins are low molecular weight GTPases that play a critical role in the control of
	proliferation, differentiation, and cytoskeletal organization. RasGAP acts as a negative regulator
	of Ras, as well as a downstream target of Ras. It participates in the signal transduction cascade
	through interactions with other signaling proteins. Via its C-terminal domain, RasGAP interacts
	with Ras, but the N-terminus interacts with other signaling molecules such as p62 and p190.
	This function of RasGAP is mediated by the presence of SH2, SH3, and PH domains in the N-
	terminal region. However, some signaling proteins cannot bind to these domains. In an attempt
	to identify RasGAP-interacting molecules, a GAP SH3-Binding Protein (G3BP) was identified.
	This protein exhibits sequence homology to the hnRNP superfamily. It contains RNP1 and
	RNP2 motifs and is found primarily in the cytosol. G3BP interacts with GAP in proliferating cells
	and is dependent on the activation state of Ras. In addition, G3BP contains an intrinsic
	endonuclease activity that cleaves 3'-untranslated region (3'-UTR) mRNA. These data indicate
	that G3BP may link the Ras pathway to mRNA degradation.
Molecular Weight:	55-70 kDa
Pathways:	SARS-CoV-2 Protein Interactome
Application Details	
Comment:	Related Products: ABIN968552, ABIN967389
Restrictions:	For Research Use only
Handling	

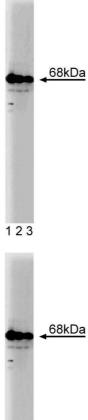

Format:	Liquid
Concentration:	250 µg/mL
Buffer:	Aqueous buffered solution containing BSA, glycerol, and ≤0.09 % sodium azide.
Preservative:	Sodium azide
Precaution of Use:	This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.
Storage:	-20 °C
Storage Comment:	Store undiluted at -20°C.
