Datasheet for ABIN968502 anti-CIT antibody (AA 1420-1612)

2 Images

4 Publications

Overview

Quantity:	50 µg
Target:	CIT
Binding Specificity:	AA 1420-1612
Reactivity:	Human, Mouse, Rat
Host:	Mouse
Clonality:	Monoclonal
Conjugate:	This CIT antibody is un-conjugated
Application:	Western Blotting (WB), Immunofluorescence (IF)

Product Details

Immunogen:	Mouse CRIK aa. 1420-1612
Clone:	6-CRIK
lsotype:	IgG1 kappa
Cross-Reactivity:	Human, Rat (Rattus)
Characteristics:	1. Since applications vary, each investigator should titrate the reagent to obtain optimal results
	2. Please refer to us for technical protocols.
	3. Source of all serum proteins is from USDA inspected abattoirs located in the United States.
	4. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide
	compounds in running water before discarding to avoid accumulation of potentially explosive
	deposits in plumbing.
	5. For fluorochrome spectra and suitable instrument settings, please refer to us.

Product Details	
Purification:	The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity
	chromatography.

Target Details

Target:	CIT
Alternative Name:	CRIK (CIT Products)
Background:	Citron was identified by its interactions with activated Rho and Rac. It contains a zinc finger
	(ZF) region, a pleckstrin homology (PH) domain, a citron/MRCK/Gek (CMG) domain, and a
	coiled-coil domain with a Rho-Rac binding region (RRB). Citron binds to PSD-95 via its C-
	terminal tSXV motif and the PDZ domain on PSD-95. This association occurs at post synaptic
	densities where citron-PSD-95 may provide a specific link between the Rho signaling cascade
	and the synaptic NMDA receptor complex. Citron Rho-interacting kinase (CRIK) and CRIK short
	kinase (CRIK-SK) are Ser/Thr kinase isoforms of the myotonic dystrophy kinase family. CRIK
	contains full-length citron, with an N-terminal kinase domain. CRIK-SK is a splice variant that
	contains only the kinase domain. CRIK co-localizes with actin in keratinocytes and co-
	expression of CRIK and Rho increases CRIK kinase activity two-fold. In addition, CRIK mutants
	cause abnormal contraction during cytokinesis. CRIK is expressed highest in testis, but is also
	present in brain, spleen, lung, and kidney. Thus, CRIK is a Ser/Thr kinase that functions
	downstream of Rho during events such as cytokinesis and synaptic transmission.
	Synonyms: Serine/Threonine Protein Kinase 21
Molecular Weight:	240 kDa
Pathways:	SARS-CoV-2 Protein Interactome, The Global Phosphorylation Landscape of SARS-CoV-2
	Infection
Application Details	
Comment:	Related Products: ABIN968539, ABIN967389, ABIN968537
Restrictions:	For Research Use only
Handling	
Format:	Liquid
	250 μg/mL
Concentration:

Handling	
Preservative:	Sodium azide
Precaution of Use:	This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which
	should be handled by trained staff only.
Storage:	-20 °C
Storage Comment:	Store undiluted at -20°C.
